What's New in the AutoDisconnect?

The purpose of this application is to automatically disconnect your internet connection after a preset amount of time. This application automatically disconnects internet connections, including dial-up, DSL, T1, ISDN, Cable, or other types of connections. This application also disconnects your internet connection when your computer has been inactive for a preset amount of time. This application will quickly become your most valuable program. Disconnect your connection: Go to the main menu and choose the disconnect button. From the main menu, you can choose to disconnect your connection after a preset amount of time or when your computer becomes inactive. Turn your computer off: Go to the main menu, choose the shutdown button. AutoDisconnect will also work if your computer's running Windows 98, 95, 2000, NT, ME or XP. AutoDisconnect will also work if your modem is PCI-80/100/200/300/600, PCI-2000, PCI-4400, PCI-4000, PCI-7400, and PCI-8200. Would you like to disconnect your connection and turn your computer off? Yes NoThis invention relates to thermal printers and, more particularly, to thermal printers capable of producing one-line high contrast images, and having a modular printhead. A thermal printer is an imaging device that utilizes a solid state printhead to transfer ink to a recording medium. The printhead selectively heats microscopic heating elements which in turn cause solid ink to melt and transfer onto the recording medium. For greatest economy, printheads are preferably as small as possible. Smaller printheads require shorter periods of time to achieve the same resolution as larger printheads. Shorter periods of time allow for more uniform printing of the entire width of the recording medium. The invention is described herein in terms of thermal ink jet printing. This example is given only by way of illustration. Those of ordinary skill in the art will recognize that the invention is not so limited. Rather, many other technologies for manufacturing thermal ink jet printheads are possible. Thermal ink jet printheads typically include a substrate that is mounted in the carrier of the printer. On the substrate, silicon structures (chips) are fabricated. Each chip has an array of nozzles (100-200 nozzles) for outputting a vertical stream of ink droplets. The chips are attached (e.g., anodically bonded) to the substrate so that the nozzles are adjacent to an ink ejection surface that is

System Requirements:

OS: Windows XP, Vista, 7, 8 and 10 Processor: 1.5 GHz single core processor or equivalent (Intel Core 2 Duo E8400 recommended for the V2.0) RAM: 2 GB RAM Hard Disk: 2 GB free disk space DirectX: 9.0 Minimum Resolution: 1024x768 Network: Broadband internet connection Sound Card: DirectX 9.0 compatible sound card Additional Notes: Minimum Installation Size: 50mb
